TITLE : MUTUAL CALL ATTAINING SYSTEM
BETWEEN DIFFERENT MOBILE
COMMUNICATION BUSINESS
ENTERPRISE SYSTEMS

ABSTRACT : PURPOSE: To improve service by informing the position information of a terminating terminal from a terminating side system to an originating side system and allowing the originating side system to calculate a relative distance between the originating terminal and the terminating terminal based upon the position information of the terminating terminal, and calculate a speaking rate based upon the relative distance.

CONSTITUTION: The position information of the terminating terminal 5 is informed from the terminating side system 2 to the originating side system 1 and the system 1 calculates the relative distance between both the terminals 3, 5 based upon the position information of the terminal 5. A speaking rate is calculated based upon the relative distance. Thereby, a speaking rate between the mobile communication systems 1, 2 of different enterprises can be calculated and mutual call between the different mobile communication enterprise systems 1, 2 can be attained. Thus, service to respective subscribers registered in respective enterprises can be improved.
